5.   Display of active Mode

6.   Display of Soft key Functions

FANUC O KEYS ON PC KEYBOARD

Number 0 on # keys is RESET = cancels most alarms, resets

program, interrupts programs

CURSOR MOVEMENT KEYS

Arrow key pointing up is CURSOR UP = moves cursor up

Arrow key pointing right = moves cursor right

Arrow key pointing left = moves cursor left

Arrow key pointing down is CURSOR DOWN = moves cursor
down, search function, program call up

PAGE UP = moves one page up

PAGE DOWN = moves one page down

CHANGE KEYS

Insert key is the ALTER = alter word (replace word)

Enter is the INSRT = insert word, create new program

DELETE = deletes word / block or a program

Enter pressed twice is EOB = End of a block or line

Back space is the CAN = deletes entries in the address

STORE KEYS

F10 is INPUT = inputs programs & offsets

F9 is OUTPUT = sends program & offsets out

FUNCTION KEYS (DISPLAY KEYS)

F12 TOGGLES THE MENU FOR THE DISPLAY KEYS

F12- F3 is for POS = displays actual, relative & all positions

F12- F4 is for PRGRM = displays program, library page

F12- F5 is for OFFSET = displays offset & work pages

F12- F6 is for SYSTEM = displays parameters & diagnostic pages

F12- F7 is for ALARM = displays operator & alarm message

F12- F11- F3 is for GRAPH = displays 2–d graph simulation

MACHINE FUNCTION KEYS

 # keys is the same as Numeric keypad or 10 key

Press / on # keys = (SKIP) Press skip any block lines with (/)
(Slash) before block number will be skipped

Press Ctrl & / on # keys = (DRY RUN) Test run without spindle on
(Remove raw material from chuck)

Press Ctrl & * on # keys = (Optional stop) for programs with (m1)

Press 0 on the # keys = (Reset) cancels most alarms, resets program,
interrupts programs

Press * on # keys = (Single block) reads one block at a time

Press . on # keys = (Cycle stop) program hold, feed hold

Press Enter on # keys = (Cycle start) program start

 =(Agreement button) used for open/closing door or to jog axis with the door open

 =(Mode Key) Automatic & Hand Mode
Hand Mode is for moving machine around with door open and works in conjunction with the (Agreement button)

DIRECTION KEYS

These keys control axis directional movements

1 on the # keys moves Y axis -
2 on the # keys moves Z axis -
4 on the # keys moves X axis -
6 on the # keys moves X axis +
8 on the # keys moves Z axis +
9 on the # keys moves Y axis +

Ctrl & 4 = Feed stop
Ctrl & 5 = Feed start
Both works in all modes but EDIT & ZRN

SPINDLE OVERRIDE KEYS

Ctrl & + on the # keys increase the spindle speed (50% to 120% highest)

Ctrl & - on the # keys decrease the spindle speed (120% to 50% lowest)

Ctrl & 6 = Spindle stop

Ctrl & 7 = Spindle start

Works in all modes except EDIT & ZRN

ACCESSORY FUNCTIONS

Press Ctrl & + for Door open

   press again Door closed

Press Ctrl & 3 for Rotary axis Indexing

Press Ctrl & 0 vise open

Press Ctrl & 9 vise closed

Press Ctrl & 2 coolant on

   press again coolant off (only 100/125/155)

Press Ctrl & 2 puff blowing on

   press again puff blowing off (only 50/55)

Press Ctrl & 8 auxiliary drives on

Press Ctrl & - auxiliary drives off

MODE CONTROL

F1 TOGGLES THE MENU FOR THE MODE CONTROL

F1 THEN F7 = ZRN for Reference or Home mode

F1 THEN F3 = AUTO for Automatic mode for running a program

F1 THEN F4 = EDIT mode for program changes or entering a new program

F1 THEN F5 = MDI for Manual Data Input mode for manually programming

> **and running the machine**

F1 THEN F6 = JOG for Manual moving the axis in X, Y, or Z

F1 THEN F11 = STEPS Incremental feed movements

F1 THEN F11 THEN F3 = STEPS 1 OR .0001 or tenths

F1 THEN F11 THEN F4 = STEPS 10 OR .001 thousands

F1 THEN F11 THEN F5 = STEPS 100 OR .010 ten thousands

F1 THEN F11 THEN F6 = STEPS 1000 OR .100 hundred thousands

FEED OVERRIDE CONTROL

+ on the # keys increase the feed rate speed (0% to 120%)

- on the # keys decrease the feed rate speed (120% to 0%)

These Control feed for jogging in the X, Y, Z axis

1. Any key with Gray highlight Press Ctrl + the key for that function

2. Some keys have two functions to them for 1st function just press the key

3. 2nd function will be Grey press Ctrl + the key for the function

4. Some automative keys when you press them 1 time this will close/turn off press them again will open/turn on

5. F1 is a toggle key for the modes: Zero, Auto, Edit, MDI, Jog and F1 then F11 give Increment Step

6. F12 is a toggle key for the Display screens: Position, Program, Offsets, Parameter, Alarm and F12 then F11 then F3 gives Graph

7. F12 then F11 then F3 then F11 then F3 gives you 3D view

8. Press enter 2 times this is the same as pressing EOB insert

9. Alt + F4 will exit the software back to the desktop

10. The Top right corner will allow the screen to be minimized, restored and close just like a standard windows screen

The machine functions are active only with NUM LOCK on

Keys are active they will move the axes if used as numbers. Use numbers on the keyboard.

Turning the Machine On/Entering Fanuc Software

Referencing the Machine

1. Make sure your feed rate is not on "0"

2. Make sure door is closed

3. Follow steps 4, 5, 6 or just do 7

4. Press 8 on the # keys this references the Z axis.

5. Press 4 on the # keys this references the X axis

6. Press 1 on the # keys this references the Y axis

7. Press 5 on the # keys this references all axis

Note: Every time you enter Fanuc O Software or Turn the Machine On you must reference the axis

WORK SHIFT

Pages 8 – 16 is setting the Work shift & offsets to the lower left corner & the top of the part with the Spindle nose
Reference points in the working area

Reference Points of the EMCO Milling Machines

M = Machine zero point
An unchangeable reference point established by the machine manufacturer.
Proceeding from this point the entire machine is measured.
At the same time "M" is the origin of the coordinate system.

R = Reference point
A position in the machine working area which is determined exactly by limit switches. The slide positions are reported to the control by the slides approaching the "R".
Required after every power failure.

N = Tool mount reference point
Starting point for the measurement of the tools. "N" lies at a suitable point on the tool holder system and is established by the machine manufacturer.

W = Workpiece zero point
Starting point for the dimensions in the part program. Can be freely established by the programmer and moved as desired within the part program.
This is a example only Work Shift can be placed anywhere on the part

Work Shift:

1. Press F1 then F6 for JOG mode

2. Jog the Spindle nose to the top of the Work Piece & touch

   using the # keys 1,2,4,6,8,9.

   (Use Feed -, + or Steps to approach at a slower feed rate)

   (Use piece of paper between nose and Work Piece)
3. Press F12 then F5 for OFFSET screen

4. Press F6 for WORK Example 2

5. Make sure that X, Y, Z are all 0 if they have values then the Work Shift will be taken from those values not from the machine 0

6. Press F3 for OFFSET

   - Example 1 in the picture below
   - Record the value in the Actual Position Relative Z

7. Press F6 for WORK Example 2
8. Move Cursor to 01 location

9. Recorded value type in Work Coordinates 01(Z) which is G54

   Example: Type Z 2.463 press Enter

This value is the distance from the top of the Machine bed to the top of the Work Piece.

```
Example 1                        F:100%  S:100%

   OFFSET                        WORK
```

Note: Machine 0 is the spindle nose touching the top of the Machine bed.

10. Jog Spindle up away from WORK PIECE using 8 on # keys

11. Place a edge finder or a tool in the Spindle (Ex. use 3/8 endmill)

12. Either Follow step 13 or follow step 14 then go to step 15

13. Jog the Tool to the left side of the Work Piece & touch using 1,2,4,6,8,9 on the # keys. (Use Feed Dial or Steps to approach slower)

14. For Scratching: Press F1 then F5 for MDI Mode

- Press F12 then F4 for PROGRAM display press until top of the screen shows MDI (Program)

- Type S1000 for spindle speed then type M03 Spindle on Clockwise press Enter

- Then press Enter on the # keys (Make sure door is closed)

- Press F1 then F6 for Jog mode

- Jog the Tool to the left side of the Work Piece & touch using 1,2,4,6,8,9 on # keys.
Note: Machine 0 in X is the center of the spindle to the left side of the Machine bed.

15. Press F12 then F5 OFFSET SCREEN

- Example 1 in the picture below
- Record the value in the Actual Position Relative X

16. Press F6 for WORK Example 2

17. Move Cursor to 01 location

18. The Recorded value PLUS the radius of the tool being used to scratch (3/8 Tool) type in Work Coordinates 01 (X)

```

NOTE: When you use a T the H = Height

   When you use a G41 or G42 the H = Radius

Program Training

Program O0001

Program O0003
Program O0005
17

- **INSERT A NEW PROGRAM**

  1. Press letter O then program number
  2. Press Enter

     Example: O0001 OR O1

- **CALL A EXISTING PROGRAM UP**

  1. Press letter O then program number
  2. Press arrow pointing down

- **INSERT A WORD**

  1. Press letter then number
  2. Press Enter

     HINT: When inserting a word place the cursor one word on

       the left before the place being inserted

     Example: _N5 G01 X 0.25; **G01** is the word being inserted

- **INSERT END OF BLOCK**

  1. Press (;)
  2. Press Enter
  3. Or press enter 2 times

     HINT : at the end of each number block needs an End Of

       Block looks like a Semicolon **(;)**

     Example: N5 G01 X1.00 F.003;

- **DELETE A PROGRAM**

    1. Press letter o then program number

    2. Press Delete

    Example: <u>O0001 OR O1</u>

- **DELETE ALL PROGRAMS**

    1. Press letter o plus the – & 9999

    2. Press Delete

    Example: <u>O – 9999</u>

- **DELETE A WORD**

    1. Press letter then number

    2. Press Delete

    HINT: Deleting a word; place the cursor on the left side

    before the word being deleted

    Example: BEFORE N5_S1000; AFTER N5;

    (S1000) is the word being deleted?

- **DELETE A BLOCK OR LINE NUMBER**

    1. Type the number block

    2. Press Delete

    Example: _N10 G0 X1.0 F.003; make sure cursor is on

    the line being deleted (_N10)

- **CANCEL MISTYPED WORD**

    1. Press Backspace

    HINT : In the ADRS. (Address) at the lower left of the screen is the word and numbers that's been typed in. Before pressing enter check if what was typed in is correct. If not press backspace and retype word or number.

- **ALTER A WORD**

    1. Type the word needed altered
    2. Press Insert

       Example: Make sure the cursor is to the left of the words being altered (_N5 CHANGE TO _N10)

- **SEARCH FOR NUMBER BLOCK**

    1. Press letter n and the number of the block
    2. Press arrow pointing down

       Example:(N50)

- **SEARCH FOR WORD**

    1. Type in word & number   **Example: (M30)**
    2. Press arrow pointing down

- **SEARCH FOR LETTER**

    1. Press letter
    2. Press arrow pointing down

    HINT: This goes to the first (G). Follow steps 1 & 2 cursor goes to the next (G)

Survey commands G CODES: Mostly used only

G00   **Rapid motion**

G01   Linear interpolation in working feed

G02   Circular interpolation, clockwise

G03   Circular interpolation, counter-clockwise

G04   Dwell time, active block by block

G09   Exact hold

G17   **Selection of plane X-Y**

G18   Selection of plane Z-X

G19   Selection of plane Y-Z

G20   Dimension in inch

G21   Dimension in millimeter

G28   Approach reference point

G40   **Deselect miller radius compensation**

G41   Miller radius compensation left

G42   Miller radius compensation right

G43   Tool length compensation positive

G44   Tool length compensation negative

G49   **Deselect tool length compensation**

G53   Machine coordinate system

G54   **Zero point shift 1**

G55   Zero point shift 2

G56   Zero point shift 3

G57   Zero point shift 4

G58   Zero point shift 5

G59   Zero point shift 6

G73   Chip break cycle

G80   **Delete drilling cycle (G83 to G85)**

G81   Drilling cycle

G83   Excavation drilling cycle

G90   **Absolute value programming**

G91   Incremental value programming

G94   **Feed in inch/min**

G95   Speed with feed in inch/revolution

G97   **Spindle speed per minute**

G98   **Retract to plane of start (drilling cycles)**

Survey commands M-CODES: Mostly used

M00   Programmed stop, unconditional
M01   Programmed stop, conditional
M03   Spindle ON clockwise
M04   Spindle ON counter clockwise
M05   **Spindle OFF**
M25   Open clamping vice
M26   Close clamping vice
M30   Main program end with new start of program
M71   Blow-off ON
M72   **Blow-off OFF**
M98   Subroutine call-up
M99   Subroutine end
A maximum of three M commands allowed for each program block!

Used Addresses

C   Chamfer
F   Feed rate, thread pitch
G   Path function
H   Tool height, tool radius
I, J, K   Circle parameter, scale factor, K number of repetition
M   Miscellaneous function
N   Block number 1 to 9999
O   Program number 1 to 9499
P   Dwell, subroutine
Q   Cutting depth or shift value
R   Radius, retraction height
S   Spindle speed
T   Tool called out
X, Y, Z   Position data
;   Block end

Tools needed for Programs 1, 2, 3, 4, 5, 6

| F1Z 010	**Collet holder**	For ESX-25 collets	
225 100	**(9.0-10.0mm)Æ 3/8"**	**ESX 25 COLLETS**

     | AUTO     | | START    | | STOP     | | REWIND   | | ERASE    |
```

Note: If you press F3 on this screen this will auto scale for you. You will need to press F2 (scroll back) to go back and enter your values that you originally had.

11. Now press Enter on the # Keys for Cycle start or F4 for Start and you will see the tool movements of the program

- **Changing I/O to floppy drive** (Only need to do this once stays default)

    1. Press F1 then F4 for **EDIT**

    2. Press F12 then F6 for **Parameter**

    3. Page down until you see Parameter (Setting 1)

    4. Cursor down to (I/O)

    5. Type A (for the floppy drive) then press Enter key

    Other Drives useable: B (Drive), C (Drive), P (Printer), 1 , 2 (Com Ports)

- **Output Program from Fanuc software to Drive unit**

    1. Press F12 then F4 for **Program**

    2. Type program number to be send out

       Example: letter <u>O</u> and program number
       (<u>O</u>0002) or (<u>O</u>2)

    3. Press F9 for Output

- **Output Offsets from Fanuc software to Drive unit**

    1. Press F12 then F5 **Offset**

    2. Press F9 for Output

- **Input Program into Fanuc Software from Drive unit**

    1. Press F12 then F4 for **Program**
    2. Type program number to be read

       Example: letter <u>O</u> and program number
       (<u>O</u>0002) or (<u>O</u>2)

    3. Press F10 for input

- **Input Offsets into Fanuc Software from Drive unit**

    1. Press F12 then F5 **Offset**

    2. Press F10 for input

N70 M30

1. To make all programs tie together or all programs O0001 thru O0003 to run together. Use M98 this calls out Sub programs or Sub routines.
Example: M98 P010001

2. After M98 P is identified with 6 digits.
   - The First 2 digits is the number of times program is to be repeated
   - The next 4 digits is the program number without the letter O

3. Programs that are being used as a Sub Programs must end with M99 instead of M30.

4. All programs can be used as Sub Programs or Main Programs M99 means program is Sub, M30 means program is a Main

5. A main Program can also use M99 at the end.
   - Program is being used to repeat without cutting multiple parts.
   - This is mainly used for Demo's for just seeing Tool movements.

6. To link all 3 programs together follow Program O0004

   - Program O0001, O0002(R), O0003 must all have M99 at the end to link together

Program O0004 (Main Program)
N5 G54 (Tie Prog. 1,2,3 together)
