1.   **Displays of Feed and Spindle Speed override**

2.   **Display of Program and Number block**

3.   **Display of active Screen**

4.   **Entry line**

5.   **Display of active Mode**

6.   **Display of Soft key Functions**

FANUC O KEYS

RESET = cancels most alarms, resets program,

interrupts programs

CURSOR MOVEMENT KEYS

CURSOR UP = moves cursor up

CURSOR DOWN = moves cursor down, search
function, program call up

PAGE UP = moves one page up

PAGE DOWN = moves one page down

CHANGE KEYS

ALTER = alter word (replace word)

INSRT = insert word, create new program

DELET = deletes word / block or a program

EOB = skip block, end of block

CAN = deletes entries in the address

STORE KEYS

INPUT = inputs program / offsets / word / numbers

OUTPT / START = sends program / offsets out

DATA INPUT KEYS

Continually press keys to see all possibilities of that Key.

Press one time a letter appears
Press again a number appears

FUNCTION KEYS (DISPLAY KEYS)

POS = displays actual, relative, machine positions

PRGRM = displays program, library page

MENU / OFSET = displays wear, geometry, work shifts pages

**DGNOS / PARAM** = displays parameters, diagnostic pages

OPR / ALARM = displays operator & alarm messages

AUX / GRAPH = displays 2–d graph simulation

SOFT KEY MODULE

GE Fanuc Series O

SCROLL BACK   **SOFT KEYS**   **PAGES OVER**

MACHINE KEYS

MACHINE FUNCTION KEYS

SKIP = **Press skip any block lines with (/ Slash) before block number will be skipped**

DRY RUN = **Test run without spindle on (remove raw material from chuck)**

1 x = **(Single piece) for continuous mode active only on automatic material loading**

OPT. STOP = **(Optional stop) for programs with (m1)**

= **(Reset) cancels most alarms, resets program, interrupts programs**

= **(Single block) reads one block line at a time**

= **(Cycle stop) program hold, feed hold**
= **(Cycle start) program start**

= **(Agreement button) used for open/closing door or to jog axis with the door open**

= **(Mode Key) Automatic & Hand Mode**
Hand Mode is for moving machine around with door open and works in conjunction with the (Agreement button)

=**(Cycle start) program start**

DIRECTION KEYS

These keys control axis directional movements

+4 & -4 = Additional axis

Reference all axis

Feed stop (Red) / Feed start (Green) works all modes but EDIT & ZRN
SPINDLE OVERRIDE KEYS

Arrow key pointing right increase the Spindle speed (120% high)

Arrow key pointing left decrease the Spindle speed (50% low)

100% key jumps speed to 100%

Spindle stop (Red) / Spindle start (Green)

Works all modes except EDIT & ZRN (Reference)

ACCESSORY FUNCTIONS

Arrow right door closed
Arrow left door open

Press once chuck open
Press again chuck closed

Press turret index's one time clockwise
Each time pressed

**Press tailstock moves backward**
Press tailstock moves forward

Press once coolant on
Press again coolant off

Press auxiliary drives on (Green)
Press auxiliary drives off (Red)

MODE DIAL

(1) **ZRN = Zero / Reference or Home mode**

(2) **AUTO = Automatic mode for running a program**

(3) **EDIT = Edit mode for program changes or entering a new program**

(4) **MDI = Manual Data Input mode for manually running the machine**

(5) **JOG = Manual moving the axis in x or z**

(6) **STEPS = Incremental feed movements**

(7) **STEPS = .0001 or tenths**

(8) **STEPS = .001 or thousands**

(9) **STEPS = .010 or ten thousands**

(10) **STEPS = .100 or hundred thousands**

(11) **STEPS = .100 or hundred thousands**

FEED OVERRIDE DIAL

Controls feed for jogging in the X Axis and the Z Axis. Overrides from 0% to 120% of the programmed feed rate or the rapid rate

Turning the Machine On/Entering Fanuc Software

Referencing the Machine

1. Press the **AUX** button (This turns on the Auxiliary Drives)

2. Press the **Agreement** button ⓣ
   Open door then **Shut** door (This Initialize the safety circuits on the Machine door)

3. Move the MODE dial to ZRN position also know as Reference make sure your feed rate is not on "**0**"

4. Press the X+ (arrow pointing up) this references the X axis.

5. Press the Z+ (arrow pointing left) this references the Z axis

6. For all axis press the Reference key
Note: Every time you enter Fanuc O Software or Turn the Machine On you must reference the axis

WORK SHIFT

Zero offset from machine zero point M to workpiece zero point W

With EMCO lathes the machine zero "M" lies on the rotating axis and on the end face of the spindle flange. This position is unsuitable as a starting point for dimensioning. With the so-called zero offset the coordinate system can be moved to a suitable point in the working area of the machine.

The offset register offers one adjustable zero offset.

When you define a value in the offset register, this value will be considered with program start and the coordinate zero point will be shifted from the machine zero M to the workpiece zero W.
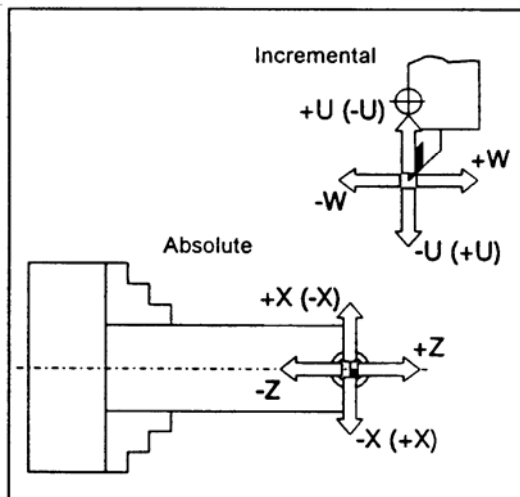

The workpiece zero point can be shifted within a program with "G92 - Coordinate system setting" in any number.
More informations see in the command description.

The Coordinate System

The X coordinate lies in the directions of the cross slide, the Z coordinate in the direction of the longitudinal slide.
Coordinate values in minus directions describe movements of the tool system towards the workpiece.
Values in plus direction away from the workpiece,

Coordinate System for Absolute Value Programming
The origin of the coordinate system lies at the machine zero "M" or at the workpiece zero "W" following a programmed zero offset.
All target points are described from the origin of the coordinate system by the indication of the respective X and Z distances.
X distances are indicated as the diameter (as dimensioned on the drawing).

Absolute coordinates refer to a fixed position, incremental coordinates to the tool position.
The bracket values for X, -X, U, -U are valid for the PC TURN 50 because the tool is in front of the turning centre on this machine.

Coordinate System for Incremental Value Programming
The origin of the coordinate system lies at the tool mount reference point "N" or at the cutting tip after a tool call-up.
The U coordinate lies in the direction of the cross slide, the W coordinate in the direction of the longitudinal slide. The plus and minus directions are the same as for absolute value programming.
With incremental value programming the actual paths of the tool (from point to point) are described. X distances are indicated as the diameter.

9

Work Shift:

1. Move the MODE dial to JOG position

2. Jog the TURRET to the face of the Work

   Piece & touch using the Direction keys.

3. Use piece of paper between TURRET and Work Piece

   A. Turn the key to hand position

   B. Press the Ⓣ and hold while pressing the direction keys

4. Press the MENU/OFSET button

   MENU OFSET

   - Press the W SHIFT Soft key (Gray Button)

5. Make sure the (Shift value) Z is 0 if not type in Z0 & press Input

6. The value that is in the ACTUAL POSITION (RELATIVE) W
   type this value in (SHIFT VALUE) Z as a negative number

7. Then press Input   **INPUT**

8. Jog TURRET away from WORK PIECE using Z+

   This value is the distance from the Spindle Nose to the end of
   the Work Piece

```
                                      F:100%   S:100%

Tool Offsets

1. Index the TURRET to a tool to be measured

   To do this press Program button `PRGRM`

   - Move the MODE Dial to MDI position

   - Type tool number then press INPUT button `INPUT`
   Example: T0200

        1. Option for Scratching type S1000 for RPM press `INPUT`

        2. Then type M04 for spindle on clockwise press `INPUT`

2. Then press CYCLE START ◈ (make sure door is closed)

3. Move the MODE Dial to JOG position

4. Jog TOOL TIP (X axis) to the WORK PIECE & touch TOOL TIP to the DIAMETER of the WORK PIECE using the Direction keys**.**

3. Press the MENU/OFSET button **MENU OFSET**

- Press the GEOM Soft key

4. Actual Position (Relative) U value subtract this from the Diameter of the Work Piece being scratched

5. Type value in G02 for X (If the tool being use is T0202)

   Then press INPUT **INPUT**

   Example: U is 3.962   Type X 2.962 (If stock is 1"dia.)

This value is the distance from the center of the Tool Station to the Tool Tip.

    WEAR       GEOM     W.SHFT
```
10. Jog TURRET away from WORK PIECE using Z+

11. The R will be Tool Tip Radius

12. The T is the Tool Direction or Tool Type

13. Repeat steps for all OD tools (STEPS 1-12)

Note: Direction that the Tool is Pointing Tool doesn't need to look like
   Tool in the Picture

Live Tools

1. Index the TURRET to a Axial Tool

- Move the MODE Dial to MDI position

- To do this press Program button `PRGRM`

- Type tool number then press INPUT button `INPUT`
  Example: T1100

2. Then press CYCLE START ⬙ (make sure door is closed)

3. Move the MODE Dial to JOG position

4. Jog TOOL TIP to the end of the WORK PIECE & touch TOOL

   TIP to the FACE of the WORK PIECE using the Direction keys.

5. Press the MENU/OFSET button $\boxed{\text{MENU OFSET}}$

- Press the GEOM Soft key

6. The Value in the Actual Position (Relative) W type this value in

   G11 for Z (If the tool being use is T1111)

   Example: W is 3.125 Type Z 3.125

7. Then press INPUT button $\boxed{\text{INPUT}}$

```
                                    F:100%   S:100%

```

This value is the distance from the center of the O.D. Tool Station to the Tool Tip.

10. **For Z type in 2.0078 inch which is (51 mm)**

11. The R is the radius of the End Mill being used. If a Drill or Tap is used no radius is needed.
12. The T will always be 0 for live tools.

2.0078 inch

51 mm

Note: Length is preset from tool manufacture (WTO), provided by EMCO Maier
Program Training

Program O0001

Program O0002

Program O0003

Change the Mode Dial to Edit & Press the `PRGRM` **to do functions below & on the next 2 Page**

- ## INSERT A NEW PROGRAM

    1. Press letter o then program number
    2. Press insert button `INSRT`

        Example: O0001 OR O1

- ## CALL A EXISTING PROGRAM UP

    1. Press letter o then program number
    2. Press cursor down button `↓`

- ## INSERT A WORD

    1. Press letter then number
    2. Press insert button `INSRT`

        Example: press once letter O appears press again number 7 appears

    HINT: When inserting a word place the cursor one word on the left before the place being inserted

        Example: _N5 G01 X 0.25; **G01** is the word being inserted

- ## INSERT END OF BLOCK

    1. Press the (EOB) button `/ , # EOB`
    2. Press insert button `INSRT`

        HINT: at the end of each number line needs an End Of Block looks like a Semicolon **(;)**

        Example: N5 G01 X1.00 F.003;

NOTE: IN EDIT & IN PROGRAM USE INSERT ONLY.
USE INPUT ALL OTHER APPLICATIONS.

- **DELETE A PROGRAM**

  1. Press letter o then program number
  2. Press delete button   `DELET`

     Example: <u>O0001 OR O1</u>

- **DELETE ALL PROGRAMS**

  1. Press letter o plus the – & 9999
  2. Press delete button `DELET`

     Example: <u>O – 9999</u>

- **DELETE A CODE**

  1. Press letter then number
  2. Press delete button `DELET`

     Example: press once <u>S</u> appears press again 0 appears

     HINT: Deleting a word; place the cursor on the left side

     before the word being deleted

     Example: BEFORE N5_S1000; AFTER N5;

     (S1000) is the word being deleted?

- **DELETE A BLOCK OR LINE NUMBER**

  1. Type the number line
  2. Press delete button `DELET`

     Example: _N10 G0 X1.0 F.003; make sure cursor is on

     the line being deleted (_N10)

- **CANCEL MISTYPED CODE**

  1. Press cancel button `CAN`

  HINT: In the ADRS. (Address) at the lower left of the screen
     is the code and numbers that you typed in. Before
     pressing insert check if what was typed in is correct.
     If not press cancel and retype code and numbers.

- **ALTER A CODE**

  1. Type the code needed altered
  2. Press alter button `ALTER`

     Example: Make sure the cursor is to the left of the words
        being altered (_N5 CHANGE TO _N10)

- **SEARCH FOR NUMBER BLOCK**

  1. Press letter n and the number of the block
  2. Press cursor down button `↓`

     Example:(N50)

  HINT: The arrow button pointing down

- **SEARCH FOR CODE**

  1. Type in code & number   **Example: (M30)**
  2. Press cursor down button `↓`

- **SEARCH FOR LETTER**

  1. Press letter
  2. Press cursor down button `↓`

  HINT: This goes to the first (G). Follow steps 1 & 2 cursor
        goes to the next (G)

Survey of commands G-GODES (Group C): Mostly used

G00   Rapid traverse
G01   Linear interpolation in working feed
G02   Circular interpolation, clockwise
G03   Circular interpolation, counter-clockwise
G04   Dwell, active block by block
G7.0   Cylindrical Interpolation OFF
G7.1   Cylindrical Interpolation
G10   Data Setting
G11   Data Setting Off
G12.1 Polar Coordinate Interpolation On
G13.1 Polar Coordinate Interpolation Off

2D Simulation

1. Press Graph button on the Display Keys for the Graph screen to appear

```
                                        F:100%  S:100%

     GRAPHIC PARAMETER                   O0000 N0000

        WORK LENGTH          W =           0.0000
        WORK DIAMETER        D =           0.0000

        PROGRAM STOP         N =             9999
        AUTO ERASE           A =                1
        LIMIT                L =                0

        GRAPHIC MINIMUM      X =           0.0000
                             Z =           0.0000
        SCALE                S =            0.000
        GRAPHIC MODE         M =                0

     NO. _
                                      JOG
       F3           F4          F5           F6          F7
    GRAPH                    ZOOM                     AUX      >
```

Note: There are only 4 values you can change on this page the rest of
them change by the values you will enter. This graph only works
with an active program and runs only the current program selected

2. Work Length W = Overall length of stock in the Z direction this is a + value

3. Work Diameter D = Overall diameter of stock in the X direction + value

4. Graphic Minimum X = any area you wish to see past X0. Usually only if a
Drill or a Tap is being used place a – value to see
the tool movements for X pasted 0
Example -.100 is a common value entered

5. Graphic Minimum Z = this value is always a negative number and this is
the area you wish to view. The longest Z- number in
the program is normally used here

6. Press the Soft key Graph for Simulation screen

```
                                            F:100%  S:100%

          S     0.000                        O0001 N0005
                                             X      0.0000
     X                                       Z      0.0000

                                                         → Z

                                          JOG
         F3           F4          F5          F6          F7
      GRAPH     G.  PRM     ZOOM    NORMAL    AUX
```
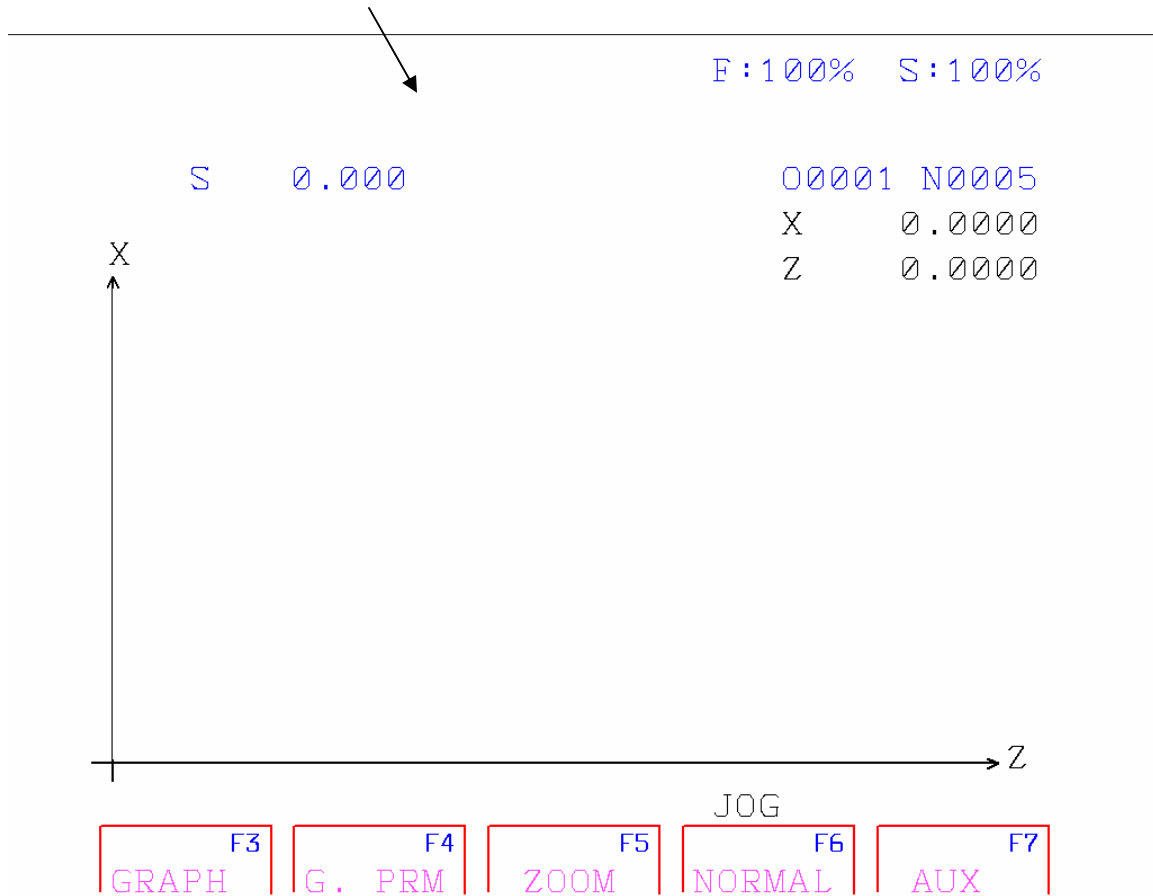

7. Now press Cycle start and you will see the tool movements of the program

- **Changing I/O to floppy drive** (Only need to do this once stays default)

    1. Move the Mode Dial to **EDIT**

    2. Press **Parameter** on the display keys

    3. Page down until you see Parameter (Setting 1)

    4. Cursor down to I/O

    5. Type A (for the Floppy Drive) press Input key

  Other Drives useable: B (Drive), C (Drive), P (Printer), 1, 2 (Com Ports)

- **Output Program from Fanuc software to Drive unit**

    1. Press the **Program** on the display key

    2. Type program number to be send out

       Example: letter <u>O</u> and program number
       (<u>O</u>0002) or (<u>O</u>2)

    3. Press (**Output Start)** key

- **Output Offsets from Fanuc software to Drive unit**

    1. Press the **Menu Offset** display key

    2. Press (**Output Start)** key

- **Input Program into Fanuc Software from Drive unit**

    1. Press the **Program** display key

    2. Type program number to be read

       Example: letter <u>O</u> and program number
       (<u>O</u>0002) or (<u>O</u>2)

    3. Press (**Input)** key

- **Input Offsets into Fanuc Software from Drive unit**

    1. Press the **Menu Offset** display key

    2. Press **(Input)** key

Program Q0001 using C/R's
G73 U = Depth of Cut   R = Retract Value

G73 P = First Block number of the Contour (Block number after the 2nd G73)

Q = Last Block number of the Contour   F = Feed rate for cycle

(Facing in a cycle)

N5 (Stock 3 x 1 alum) (Demo 1)

N40 G73 P45 Q65 F.004……………........cycle begin and end lines

N45 G0 X0……………………………………first line of cycle

N50 G1 Z0.0……………………….…………movement to face of part

N55 X.5 **C.05**………………………………1st diameter of contour

N60 Z-1.0 **R.1**……………………………….length of contour

N65 X1.0……………………………….…..diameter of contour

N70 G0 G28 U0 W0…………………….……safe move

N75 M30…………………………….………end of program

Program O0002
G73   **U** = Depth of Cut   **R** = Retract Value

G73   **P** = First Block number of the Contour (Block number after the 2nd G73)
   Q = Last Block number of the Contour   **U** = Allowance for Finish cut in X
   W = Allowance for Finish cut in Z   **F** = Feed rate for the cycle

HINT:

The X **BEFORE** G73 example (X 1.25) should be (=) to or (>) than X at the **END**

of the Cycle. X at the end of the cycle determines stock size

G72   **P** = First Block number of the Contour (Block number after G73)
   Q = Last Block number of the Contour

HINT:

BEFORE the G72 call a spindle **SPEED** higher and **FEED** rate lower

If possible change tool to a 55 degrees for FINISHING & 80 degree for

ROUGHING

G78 CYCLE MULTIPLE
Example for 1/2 20 thread

1ST G78

P = Is 6 Digits divided in 2 Digit groups

P = 1st two digits is number of FINISH PASSES   01

     2ND two digits is PULL OUT ANGLE   00

     3rd two digits is angle of the THREADS   60 degrees

Q = Minimum cutting DEPTH   0020 (Micro IN)

R = Finishing OFFSET   .001

2nd G78

X = Minor DIA.   X .434

Z = Length of THREAD from (0) call out   Z -1.05

P = Depth of THREAD Radial   0330 (Micro IN)

Q = First cutting DEPTH   0120 (Micro IN)

F = Thread PITCH   .050

Micro IN is the value without the decimal point

Example: .1000 is shown as 1000 (show all 4 place values)

HINT:
Threading

$$\frac{1}{TPI} = \frac{1}{20} = (F)\ .05$$

IPM = RPM X PITCH

$$RPM = \frac{IPM}{PITCH} = \frac{50}{.05} = 1000\ RPM$$
     300 is max for a 155 machine
     315 is max for a 325II Machine

Make sure the X value before the G78 is larger than the MAJOR Diameter and the Z is at least 2 times the PITCH before cutting threads

     Example: N100 G0 X.55 Z.1 ;   THIS IS THE START POINT FOR G78
           N105 G78;

N170 M30…..…………………………….End of Program

1. To make a program tie together use M98 this calls out Sub programs or Sub routines.
   Example: M98 P010001

2. After M98 P is identified with 6 digits.
   - The First 2 digits is the number of times program is to be repeated
   - The next 4 digits is the program number without the letter <u>O</u>

3. Programs that are being used as a Sub Programs must end with M99 instead of M30.

4. All programs can be used as Sub Programs or Main Programs M99 means program is Sub, M30 means program is a Main

5. A main Program can also use M99 at the end.
   - Program is being used to repeat without cutting multiple parts.
   - This is mainly used for Demo's for just seeing Tool movements.
